## Worksheet 2-6: Zero and Negative Exponents Investigation

The following tables show the descending powers (decreasing powers) of 2 and 10.

1. For the following tables, evaluate each power with the aid of a scientific calculator.

| Power <br> Form | Standard <br> Form | Fraction <br> Form | Denominator <br> as a Power |
| :---: | :---: | :---: | :---: |
| $2^{4}$ | 16 | 16 | - |
| $2^{3}$ |  |  |  |
| $2^{2}$ |  |  |  |
| $2^{1}$ |  |  |  |
| $2^{0}$ |  |  |  |
| $2^{-1}$ |  |  |  |
| $2^{-2}$ |  |  |  |
| $2^{-3}$ |  |  | $\frac{1}{2^{4}}$ |
| $2^{-4}$ | 0.0625 | $\frac{1}{16}$ |  |

| Power <br> Form | Standard <br> Form | Fraction <br> Form | Denominator <br> as a Power |
| :---: | :---: | :---: | :---: |
| $10^{4}$ | 10000 | 10000 | - |
| $10^{3}$ |  |  |  |
| $10^{2}$ |  |  |  |
| $10^{1}$ |  |  |  |
| $10^{0}$ |  |  |  |
| $10^{-1}$ |  |  |  |
| $10^{-2}$ |  |  |  |
| $10^{-3}$ |  |  |  |
| $10^{-4}$ | 0.0001 | $\frac{1}{10000}$ | $\frac{1}{10^{4}}$ |

2. Compare your answer for $2^{0}$ and $10^{\circ}$. What is the common pattern for any power with a zero exponent, $a^{0}$ ?
3. Compare your answer for $2^{1}$ and $10^{1}$. What is the pattern for any power with exponent "1", $a^{1}$ ?
4. Compare your answers for negative exponents of 2 and 10. Are they negative or positive?
5. After writing the denominator of each fraction as a power of 2 or 10 , what is the pattern for powers with negative exponents, $a^{-n}$ ?
6. Use your conclusions to Question 3 to 5 to evaluate $345^{0}, 100^{1}$ and $8^{-2}$.
$\qquad$
$\qquad$

## Conclusion:

## Exponent Law 4 - The Zero Exponent Rule

$$
\boldsymbol{a}^{0}=
$$

$$
\text { where } a \neq 0
$$

## Exponent Law 5 - The Exponent "1" Rule

$$
\boldsymbol{a}^{1}=
$$

Exponent Law 6 - The Negative Exponent Rule

$$
a^{-n}=
$$

where $a \neq 0$
**We always simplify with positive exponents**

Practice:

1. Simplify the following powers.
(a) $12^{0}$
(b) $5^{1}$
(c) $523515^{0}$
(d) $x^{1}$
2. Write the following as a single power with positive exponent(s).
(a) $11^{-2}$
(b) $4^{-3}$
(c) $123^{-1}$
(d) $3^{-4}$
3. Simplify then evaluate the following for $x=3$ and $y=4$.
(a) $\frac{x^{3} y^{2}}{x^{2}}$
(b) $\frac{x^{1} y^{2}}{x^{0}}$
(c) $x^{-2}+y^{-1}$

Answers: 1. (a) 1 , (b) 5 , (c) 1 , (d) $x$; 2. (a) $\frac{1}{11^{2}}$, (b) $\frac{1}{4^{3}}$, (c) $\frac{1}{123^{1}}$, (d) $\frac{1}{3^{4}}$; 3. (a) $x y^{2}, 48$, (b) $x y^{2}, 48$, (c) $\frac{13}{36}$.
